useful

```
The invention relates to the human growth factor homologue zvegf4

(AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member

CC of the PDGF (Platelet-derived growth factor)/FGGF (vascular endothelial

growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

CC AAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like

CC (AAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like

CC CAAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like

CC CAAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like

CC Tragments thereof, and has also been shown to stimulate bone

CC Zvegf4 or fragments thereof, particularly human zvegf4/human zvegf4/human zvegf4 human zvegf4 gene of a patient. Zvegf4 proteins and derived zvegf4 derived polypeptides; and a method of detecting a genetic zvegf4 derived polypeptides; and a method of detecting a genetic callular differentiation or proliferation. They are particularly used for the treatment of periodontal disease and fractures. They may also be used to multiple sclerosis). Due to their osteogenic activity, they may be used to multiple zelerosis). Due to their osteogenic and endothelial precursor stem cells, which may

nurine 2VEGT3 are claimed. The growth factors comprise a growth factor domain and a CUB domain (generic sequence motifs are shown in AAY96859 and AAY96860). The growth factor domain is characterized by an arrangement of cysteine residues and beta-strands that is characteristic of the "cysteine knot" structure of the platelet-derived growth factor (b The "cysteine knot" structure of the platelet-derived growth factor of the "cysteine knot" structure of the platelet-derived growth factor (b The "cysteine knot" structure of the platelet-derived growth factor (b The "cysteine knot" structure of the platelet-derived growth factor (b The "cysteine knot" structure of the platelet-derived growth factor (b The "cysteine knot" structure of the platelet-derived growth factor (b The "cysteine knot" structural analysis and homology to CUB domains in neuropilins, human bone morphogenetic protein-", porcine seminal plasma tortein, bovine acidic seminal fluid protein and Xenopus laevis to the human zvegf3 gene has been mapped to chromosome 4Q28.3. ZVEGT3 is useful for stimulating the growth of fibroblasts or smooth muscles cells, for activating cell surface PDGF-alpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZVEGF3 is useful for requilating (post-development) organ growth, regeneration and maintenance, as well as tissue maintenance and repair processes. ZVEGF3 diabetto retinopathy, ischemic lind disease, peripheral vascular intimal hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel gregf3 polypeptides and nucleotides encoding them useful for stimulating growth of smooth muscle cells and fibroblasts comprising an epitope bearing portion of a specific amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   atheroscierosis, wound healing, chronic liver disease and haemangioma formation. ZVEGF3 can also be used to modulate neurite growth and development of the nervous system, and for treating neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This shows a murine ZVEGF3 a novel vascular endothelial growth factor
                                                                                                                              Vascular endothelial growth factor; homologue; zvegf3; CUB domain; Systeine Knot; platelet-derived growth factor; pDGF; neuropilin; chromosome 4q28.3; cytostatic; anti-psoriatic; anti-inflammatory; anti-diabetic; ophthalmological; anti-rheumatic; anti-arthritic;

and/or growth or motility of cells expressing a PDGF-C receptor. PDGF-C polypeptides can be used in pharmaceuticals for promoting cell proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C. PDGF-C can also be used to promote fibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation. PDGF-C antagonists can be used to inhibit tumour growth of a tumour expressing PDGF-C in a mammal. Specific types of human tumours, e.g. choriocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     VEGF-E; human; vascular endothelial cell growth factor; wound repair; treatment; cardiovascular disorder; endothelial disorder; therapy; tissue generation; regeneration; cardiac hypertrophy; cancer; detection; angiogenic disorder; age-related macular degeneration; vascular disease; neovascularization; tumor; gene mapping.

                                                                                                                                                                                                                                                                                                                                                                                                        and erythroleukemia, can be identífied by testing for expression of PDGF-C. PDGF-C antagonists can also be used to inhibit tissue remodelling during invasion of tumour cells into a normal population cells. Antagonists can also be used to treat fibrotic conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has tranquilizer, vulnery and cardiant activity. VEGF-E can be administered therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially companies. It is useful in wound repair and tissue generation and create cardiac hypertrophy it can be combined with a carrier in pharmaceutical compositions, which can be combined with a carrier in pharmaceutical compositions, which can be administered to treat disorders as above. VEGF-E can be used to careen for antagonists and agonists, and the antagonists administered to treat angiogenic disorders in mammals (especially humans) e.g. cancer or section therapeutically as antagonists, as above. The antibodies, useful therapeutically as antagonists, as above. The antibodies, useful therapeutically as antagonists, as above. The antibodies are also cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation), by contacting the antibody with a tissue sample and detecting formation of an antibody vEGF-E polypeptide complex. Polyucleotides encoding the antibody vEGF-E polypeptide complex. Polyucleotides encoding the antibody vEGF-E polypeptide complex. Polyucleotides encoding the antibody vEGF-E polypeptide complex. Polyucleotides encoding succeptibility to a disease related to a mutated form of vEGF-E can be used to diagnose cardiovascular and endothelial disorders in mammals, by detecting abnormally high or low VEGF-E gene expression in tissue samples. They may also be used to probes useful to detect related as a tumor), by detecting a mutation in the VEGF-E-encoding sequence isolated from a samples. They may also be used to produce probes useful to detect related sequence isolated as a tumor of sequence or formation and per page to produce probes useful to detect related as sequence isolated as a tu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequences or for gene mapping. This sequence represents the human VEGF-E protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New growth factor polypeptide useful for treating cardiovascular or

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated tinclude blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        secreted and transmembrane polypeptides and their polynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for treating blood coagulation disorders, cancers and cellular

VEGF-R can be used in assays to identify compounds that bind to it or that antagonize its activity. VEGF-R antagonizes (e.g. anti-VEGF-R antibodies) are useful for inhibiting tissue growth. This is useful for inhibiting timmur growth and for treating cancer. VEGF-R itself can be used to stimulate tissue yrowth, anglogenesis and to treat coronary artery blockage. The VEGF-R coding sequence can be used for the recombinant production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vascular endothelial growth factor related protein; VEGF-R protein; tissue growth inhibition; tumour growth; cancer; tissue growth; angiogenesis; coronary artery blockage.

The invention relates to the human growth factor homologue zvegf4

(AAB4865), and nucleic acids encoding it (AAC8155). Zvegf4 is a member

C of the PDGF (platelet-ted-troed growth factor)/VGGF (vascular endothelial

growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

CC (AAA9865) which has a beta barrel structure, and a CUB domain

CC (AAA9865) which has a beta barrel structure, vacqf4 has PDGF-like

CC (AAA9865) which has a beta barrel structure. Svegf4 has PDGF-like

CC (AAA9865) which has a beta barrel structure.

CC growth. The invention also relates to fusion proteins comprising human

C zvegf4 or fragments thereof, particularly human zvegf4/human zvegf4

CC fusions; expression constructs and host cells comprising human zvegf4

CC nucleic acids; the recombinant expression of human zvegf4, an antibody

Which binds to human zvegf4 or a fragment thereof; a method of activating

CC cell-surface PDGF receptor using a zvegf4-derived polypeptide; a

CC method of modulating the proliferation, differentiation or

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic.

CC zvegf4-derived polypeptides; and a method of detecting a genetic of the treatment of perpen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   used to enhance expansion and mobilisation of haematopoietic stem cells and endothelial precursor stem cells, which may be useful in the treatment of ischaemia, in wound healing, and in the modulation of the immune system. The present sequence represents human zvegf3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MILLGLILLTSALAGQRTGTRAESNLSSKLQLSSDKEQNGVQDPRHERVVTISGNGSIHS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for enhancing tissue growth, promoting wound healing or stimulating smooth muscle growth by administering a platelet-derived growth factor (PDGF) related protein, designated LPB or its analogue. Also described is a method of slowing the progress of atherosclerosis or treating atherosclerosis comprising the administration of an LPB antagonist. The method is useful for enhancing tissue growth, promoting wound healing and stimulating smooth muscle growth. Antagonists of LDB are useful for treating approaches. The present sequence represents human LPB, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Enhancing tissue growth and promoting wound healing by administering platelet-derived growth factor related protein, LP8 or its analog and treating atherosclerosis by administering LP8 antagonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEEPSDGSVL 120

sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, eg. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -

regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the RACE generated human VEGF-X protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VEGF-X; vascular endothelial growth factor; human; vulnerary; cytostatic; antirheumatic; antiarthritic; antipsoriatic; antidiabetic; treatment; angiogenesis regulator; vascularization regulator; cancer; psoriasis; rheumatoid arthritis; diabetic retinopathy; blood vessel; organ repair; tissue regeneration; tissue repair; wound; dermal ulcer; pressure sore; venous sore; diabetic ulcer; burns; skin graft growth.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                           (VEGE-X) protein (Ia) and its encoding polynocleotide (IIa) which has uninearry, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidiabetic activity and actes as an anajogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic cretinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGF-X protein cisolated from clones 4 and 7 described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GRWCGSGTVPGKQTSKGNHIRIRFVSDEYFPSEPGFCIHYSIIMPQVTETTSPSVLPPSS 180

Human VEGF-X protein #4

```
(VEGF-X) protein (1a) and its encoding polynucleotide (1a) which has vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidabetic activity and acts as an angiogenesis and vascularization certivity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic certinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ at subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents a human VEGF-X protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -

This invention describes a novel vascular endothelial growth factor-X
(VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has
vulnerary, cytostatic, antinhemmatic, antiantitic, antipsoriatic and
antidiabetic activity and acts as an angiogenesis and vascularization
regulator. An antisense molecule of the invention is useful for treating
or preventing cancer, rheumatoid arthritis, psoriasis and diabetic
retinopathy by inhibiting angiogenic activity or inappropriate
vascularization including formation and proliferation of new blood
vessels, growth and development of tissues, tissue regeneration and organ
and tissue repair in a subject. The products of the invention are useful
for preparing medicaments for treating wounds such as dermal ulcers,
pressure sores, venous sores, diabetic ulcers and burns and to promote
tissue regeneration and organ repair, proliferation of new blood vessels,
tissue regeneration and organ repair by promoting angiogenic activity or
vascularization. This sequence represents the human 990126vegx protein
used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                   VEGF-X; vascular endothelial growth factor; human; vulnerary; cytostatic; antirheumatic; antiarthritic; antipsoriatic; antidiabetic; treatment; antiologesis regulator; vascularization regulator; cancer; psoriasis; rheumatoid arthritis; diabetic retinopathy; blood vessel; organ repair; tissue regeneration; tissue repair; wound; dermal ulcer; pressure sore; venous sore; diabetic ulcer; burns; skin graft growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds \cdot

antidiabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting anglogenic activity or vascularization. This sequence represents the human VEGF-X protein described in the method of the invention.

The present sequence is that of human PRO200 or vascular endothelial growth factor E (VEGF-E), as predicted from a cDNA clone (see AAA88515) that was isolated from a glioma cell line G61 ibrary using probes (see AAA88523-26) based on an expressed sequence tag (see AAA88522) that showed homology to VEGF. PRO200 has a predicted mol.wt. of 39,029 and a pI of about 6.06. A method for producing PRO polypeptides, including PRO200, using a host cell transformed with a vector comprising a PRO nucleic acid is claimed. The invention relates to the use of PRO polypeptides to delay, prevent or rescue retinal cells such as retinal neurons selected from photoreceptors, retinal ganglion cells, displaced retinal and photoreceptors and supportive cells displaced retinal and bignent epithelial cells) from injury and degradation. The retinal cells are preferably photoreceptors and photocreceptor cell injury or death is caused by retinal injury, light or environmental trauma or by an ocular disease selected from retinils pigmentosa, macular of degeneration, including age-related, retinal degenerative myopla, acute retinal necrosis syndrome, trainal cells, contained to the cells in the retinal necrosis syndrome, trainal cells, however, extinoned the contained to the cells of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Appli
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5981717

GENERAL INFORMATION:
APPLICANT: Greenspan, Daniel S
APPLICANT: Takahara, Kazuhiko
TITLE OF INVENTION: Mammalian Tolloid-Like Protein
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSER: Quarles & Brady
STREET: 1 South Pinckney Street
CITY: Madison
STATE: WI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA: APPLICATION NUMBER: US/09/021,287

A;Title: Bone morphogenetic protein-1 and a mammalian tolloid homologue (mTld) are encod A;Reference number: A58788; MUID:95096114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 F;91.142,332,363,599/Binding site: carbohydrate (Asn) (covalent) #status predicted F:91.142,332,363,599/Binding site: carbohydrate (Asn) (covalent) #status predicted F:163-319,185,205,322-348,375,397,435-461,488-510,551-565,559-572,574-587,591-617,644-66 F:213,217,223,272/Binding site: zinc (His, His, His, His, Tyr) #status predicted F;214/Active site: Glu #status predicted F:565/Modified site: erythro-beta-hydroxyasparagine (Asn) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hev
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A Description: catalyzes hydrolysis of the carboxyl-terminal propeptide of collagen tyn C. Superfamily: procollagen C-endopeptidase; astacin homology; CIr/CIs repeat homology; F:1-22/Domain: signal sequence #status predicted <SIG>
F:23-823/Product: procollagen C-endopeptidase splice form HIS #status predicted <MAT>
F:33-823/Product: astacin homology <AST>
F:32-431/Domain: CIr/CIs repeat homology <CIRI>
F:435-544/Domain: CIr/CIs repeat homology <CIRI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        R.W.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7;

A5921
Ra-reactive factor (EC 3.4.21.-) 2 precursor - human
N;Alternate names: mannose binding protein-associated serine proteinase 2 (MASP-2)
C;Species: Homo sapiens (man)
R;Thiel: A second serine protease associated with mannan-binding lectin that activates A;Tefle: A second serine protease associated with mannan-binding lectin that activates A;Tefle: A second serine protease associated with mannan-binding lectin that activates A;Tefle: A status: nucleic acid sequence not shown; not compared with conceptual translation
A;Molecule type: mRNA
A;Status: nucleic acid sequence not shown; not compared with conceptual translation
A;Molecule type: mRNA
A;Status: nucleic acid sequence intoluding the amino end of the mature protein, were dete
C;Genetics:
A;Note: parts of this sequence, including the amino end of the mature protein, were dete
C;Genetics:
A;Gene: GDB:MASP2
A;Cross-references: GDB:6071500
A;Map: position: Lp36.2-lp36.3
C;Superfamily: complement subcomponent Clr; Clr/Cls repeat homology; complement factor H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C.Species: Xenopus laevis (African clawed frog)

                                                                                                                                                                                                                                                                                                                                       -!- FUNCTION: INVOLVED IN PATTERN FORMATION IN GASTRULA AND LATER DIFFERENTIATION OF DEVELOPING ORGANS.
-!- DEVELOPMENTAL STAGE: BLASTULA, EARLY GASTRULA AND HATCHED TADPOLES; LITTLE OR NO EXPRESSION IN WORULA AND LATE GASTRULA.
-!- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
-!- SIMILARITY: CONTAINS 3 CUB DOMAINS.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY MI2A (ZINC METALLOPROTEASE); ALSO KNOWN AS THE ASTACIN SUBFAMILY.

ENDOPEPTIDASE ENHANCER PROTEIN.

ITSUES PRECIFICITY: AT HIGH LEVELS IN EMBRYONIC MATERNAL DECIDUUM AND FLOOR PLATE REGION OF THE NEURAL TUBE. LESS IN DEVELOPING MEMBRARANOUS AND ENDOCHONDRAL BONE, SUBMUCOSA OF INTESTINE, DERMIS OF SKIN AND THE MESENCHYME OF SPLEEN AND LUNG.

SIMILARITY: CONTAINS 2 EGF-LIKE DOMAINS.

SIMILARITY: BELONGS TO REPTIDASE FAMILY M12A (ZINC METALLOPROTEASE); ALSO KNOWN AS THE ASTACIN SUBFAMILY.
